

Northwind Traders Analytics Project

Problem Statement

The objective of this Power BI analytics project is to design an interactive and visually appealing dashboard that effectively communicates key business performance metrics for Northwind Traders. The project focuses on analyzing customer behavior, sales performance, supplier contribution, product trends, operational efficiency, and employee performance to support data-driven decision-making. The dashboard consolidates data from multiple datasets into a unified analytical view, enabling stakeholders to identify trends, monitor KPIs, and explore insights through interactive visualizations and dynamic filters. The expected outcome of this project is to improve business visibility, support strategic planning, identify operational opportunities, and enhance overall decision-making capabilities within the wholesale business environment.

Project Overview

Project Goal	Analyze sales, customer, supplier, employee, and product data to derive actionable business insights.
Tools & Technologies	SQL, Excel, Power BI, GitHub
Dashboard Pages	Executive Overview, Customer Analysis, Employee Analysis, Product & Sales Analysis, Supplier & Regional Analysis
Key Outcome	Interactive dashboards enabling business intelligence and data-driven decision-making.
