

Northwind Sales Analytics Project

Project Overview

This project analyzes the Northwind Traders dataset using Excel, SQL, Power BI, and DAX to generate business insights related to sales performance, customer behavior, product analysis, supplier operations, employee contribution, and regional sales distribution.

The project includes interactive dashboards, KPI analysis, EDA techniques, and business reporting to support data-driven decision-making.

Tools & Technologies Used

- Excel — Data Cleaning & Exploratory Data Analysis
- SQL — Data Querying & Business Analysis
- Power BI — Dashboard Development & Visualization
- DAX — KPI Measures & Calculated Metrics

Dashboard Sections

- Executive Overview Dashboard
- Customer Analysis Dashboard
- Employee Analysis Dashboard
- Product & Sales Analysis Dashboard
- Supplier & Operations Dashboard

Key Insights

- Total revenue exceeded **\$1.35M** across 760 orders
- Beverage and Dairy Products generated strong sales contribution
- Customer distribution was concentrated across North America and Europe
- Average shipping duration was approximately **8.65 days**
- Revenue trends showed strong growth during peak sales periods
- Employee contribution analysis highlighted operational performance insights

Project Workflow

Raw Dataset → Excel Cleaning & EDA → SQL Analysis → Power BI Dashboard Development → DAX KPI Measures → Business Insights & Reporting

Files Included

Dashboard Files

- Executive Dashboard PBIX
- Question-Wise Analysis PBIX
- Dashboard Preview Images

Presentation

- Project Presentation PPT

Reports

- MECE Business Analysis Report

- EDA Excel File

Dataset

- Cleaned Dataset Files

Business Outcome

The project successfully transformed raw operational data into interactive business intelligence dashboards that provide insights into customer behavior, sales trends, supplier operations, employee performance, and overall business efficiency.
